Project Details:

Now-a-days Online shopping has become a regular part of our daily life. We are constantly searching a perfect online shop with the best product and on time delivery. So our idea is to make an eCommerce online shop so that customers get their best deals. **More or less we always concern about delivery time and where my ordered product is?** So we are making an online shop that you can get location details of your ordered product like **where it is now?** In shop? Delivery man ? or On the way to your home?

Features:

- Multivendor eCommerce website
- Product location after order
- Admin panel for every shop and view mode
- Promoting social media with creating add
- Collecting buyers mail and Fb id with collecting forms
- Shop Decoration
- Categorywise shop
- Price and Product comparison
- SSL secure Payment System
- All other advantage and features does have a modern eCommerce website .

Technology:

Giving more priority in user experience and user interface. Our plan is to make eye-catching online shop using **Javascript** with the help of **Node.js** and **Express.js** .

Business Plan:

Our business plan will be unique. Giving opportunity for all the sellers to promote their Products into all social media from our shop(we'll help them to create add to our premium sellers) . We will make paid promotion for all the sellers like popup with lead collecting form.
